**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Priority*

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al (US 5,369,453). Chen et al teaches a system for correcting color blindness comprising: spectacles having a first and a second lens; where the first lens is configured to correct colorblindness and the second lens is configured to improve an overall brightness of vision (see col. 2, line 60-col. 3, line 49; col. 4, lines 33-62). Although Chen does NOT specifically state that **only** the first lens is configured to correct **only** color blindness, while **only** the second lens is configured to **only** improve an overall brightness of vision, rectifying color blindness and brightness are provided by both lenses, thereby satisfying the claim language. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have a first lens configured to correct colorblindness and a second lens configured to improve

an overall brightness of vision, since both lenses inherently do this. The system of Chen et al creates an individual spectral curve (noted in the passages listed above), where the color of a lens is adjusted using the individual spectral curve. As shown by Fig. 4, the lenses have an adjusted range of brightness varying from 500-600 nm. Note, the lenses are placed under a vacuum chrome plating process (col. 4, lines 56-62).

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Li Y et al (CN 1365654 A) is cited to show glasses for correcting color blindness and brightness.
